

# CP5500 RANGE INFORMATION & CP5500-605 / -505 DIFFERENCES

## CP5500, 3 Pedal, Push Type Floor Mounted Pedal Box

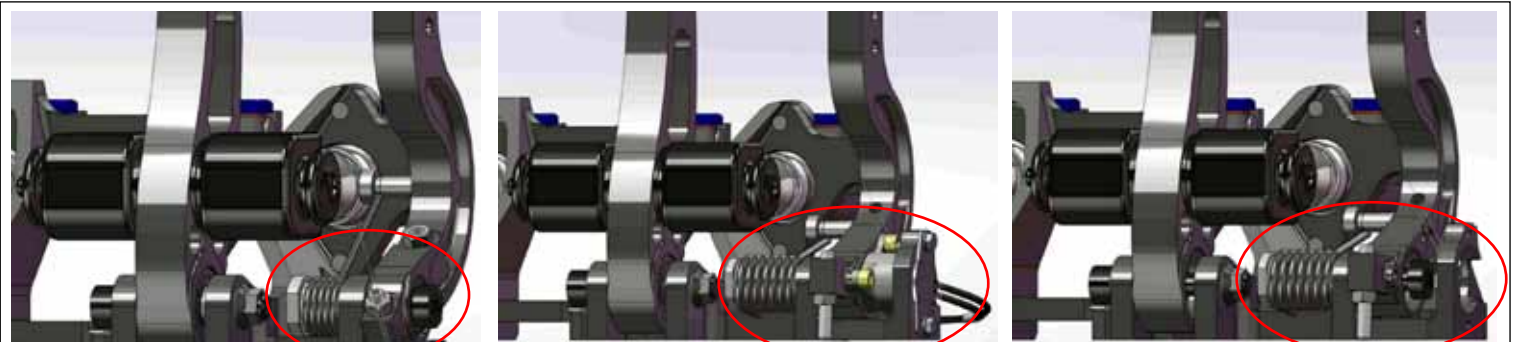

CP5500-605 is an updated three pedal box assembly. CP5500-605MTS & UTS versions include a new contact less rotary sensor with dual input/output for redundancy and a stronger throttle spring to suit.

CP5500-605M & U are available without throttle sensor fitted. (Fig 1. Depicts the main difference between -605 & -505 types).

**CP5500-605** will replace **CP5500-505** which will be made inactive in the near future once existing stocks have been exhaust but continues to include all the similar features its predecessor benefited from. See attached installations drawing for details.

A complete part number and supercession guide to CP5500 range is below.
